A portable controller

An arrangement for configuring a device (102) of a system (101) by transferring control information from a removable controller (2) thereto is disclosed. The controller (2) comprises input means (12) for receiving control information for configuring the device (102), memory circuitry (6) arranged to store and retrieve control information for configuring the device (102), and output means for transferring to the system (101) retrieved control information for the device (102). The system (101) comprises means (128) for coupling with the output means of the removable controller (2) to transfer retrieved control information therefrom, and control means (114) arranged to configure the device (102) in dependence upon the transferred control information.
